

Multifibre

Multifibre, comprising strips of different fibres, is used as the adjacent fabric in many colour fastness tests including colour fastness to washing, dry cleaning, water, perspiration and many others.

We inspect every metre of Multifibre to ensure you receive perfect fabric every time. It complies with the requirements of ISO 105 F10 and is approved by many UK and European specifiers. We supply Multifibre in rolls or cut pieces.

American Multifibers, suitable for AATCC test methods, are different in composition and construction. We stock the most commonly used variants.

Code	Multifibre DW – European (ISO 105 F10)
702-500	Multifibre Adjacent Fabric DW - per roll (10m)
702-520	Multifibre Adjacent Fabric DW - per box (250 pieces) 10 x 4cm (<i>gimped edges</i>)

702-439	Multifiber Adjacent Fabric Style 49 - per roll (10m)

Please see Product Codes on pages 14 – 22 for a more comprehensive list of the test materials that we offer.

GyroWash – Washing and dry cleaning colour fastness tester

The new GyroWash range comprises two machines: one with 8 and one with 20 positions.

You can place either a small or large vessel in each position, so there is complete flexibility, should you wish to test to both ISO (small vessel) and AATCC (large vessel) standards.
